

Accidents & Incidents Facing the Reality

Along with our efforts to Cause No Harm, we have to embrace the fact that sometime, someday, if we do not manage our business fully, then an accident or incident is going to occur.

This is a good thing to recognise, rather than hiding our head in the sand and convincing ourselves that accidents will not happen under any circumstances.

By acknowledging that we cannot always know what the future holds, gives us the opportunity to be more vigilant in the present moment, in what we are doing right now, in the actions we are taking in terms of preventing harm.

By being "present", in the Here and Now in all that we do, we have access to a greater use of our senses and an intuitive source that can guide us to Cause No Harm.

Stay focused, stay in present time and ask yourself continuously, will this cause harm and together we can do our bit to ensure we don't.

Cause No Harm

Practical Application Cause No Harm to the Planet as a Whole

We are already seeing the adverse effects of global warming, deforestation, CO2 emissions, waste build-up and pollution to air, land and water. We must consider the long term effects of our decisions and actions and ask ourselves seriously, will this cause harm? As a company we must act to reduce the burden placed on this planet's ecosystems and all forms of life.

One of these ways we can do this is through the five 'Rs':

- **Reduction:** generate less waste through more efficient practices
- **Reuse:** re-use waste materials in their original form
- **Recycle:** convert waste back into a reusable material
- **Recover:** extract material or energy from waste for other uses
- **Residue:** efficient disposal of the remaining residues.

There are many other ways in which we can contribute to arresting the polluting effects on this planet and our starting point is when considering our work and actions asking ourselves,

Will this cause harm?

Think before you act!!

Our Vision:
Together we establish a world class oil and gas service organisation by 2012

Did You Know?

The Da Li Hao has completed its work in Indonesia and is heading back to Singapore. After that she will sail for Malaysia.

We are on the move!!

This month (yes, it has finally arrived) we are moving to our new headquarters in Cyberhub@IBP.

This represents a major milestone in the growth and development of Swiber as a worldwide company and each and every one of you who have contributed in any shape or form to where we are today, is acknowledged and greatly appreciated.

Enjoy our new space and this new chapter in the expansion of our company
